Art Unit: 1636

Claims 1-13, 24, 25 and 31 are allowed.

Upon reconsideration of the language of the claims, it is deemed that the rejection under 35 USC §102(b) must be maintained for the reasons below.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-21, 26 and 29 stand rejected under 35 U.S.C. 102(b) as being anticipated by Brighton et al. (of record).

Claims 16-21, 26 and 29 stand rejected under 35 U.S.C. 102(b) as being anticipated by Dugot (of record).

Applicant has responded to these rejections together.

At the paragraph bridging pages 9 and 10 of the amendment filed 21 June 2010, Applicant argues that the claims are now amended “to specify that the signal source controls and varies ‘duration of time of application of said at least one specific and selective signal for a predetermined duration of time from approximately ½ hour to 24 hours per 24 hour period at a predetermined duty cycle from approximately 10%-100%’ so as to selectively up-regulate the gene expression of BMP-2, BMP-4, BMP-5, BMP-6, and/or BMP- 7 in the targeted tissue as measured by mRNA as a result of application of the specific and selective field in the targeted tissue. These features are nowhere shown or suggested by Brighton or Dugot.” However, the

Art Unit: 1636

device of either Brighton or Dugot can output the recited signal. The recitation of the BMP-genes represents mere intended use, and convey no structural limitation on the claimed device.

At the first paragraph at page ten Applicant argues that Dugot merely teaches turning the device on and off, relating to duration of treatment. However, the duty cycle is also regulated by a pattern of on-and-off control of the signal, which the device of Dugot can produce. There is no definition of duty cycle presented in the specification which would exclude the function and signal thus produced by Dugot. With respect to Brighton, this particular argument is not advanced.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
